1 Théorie

1.1 Syntaxe

e, σ, κ *drule* $e : \sigma$ *annotated term* *drule* x *variable* *drule* $\lambda x \mapsto e$ *lambda* *drule* e *'application* *drule* $\Pi(x : \sigma). \sigma$

where e , σ , κ represent general expressions, types and kinds respectively.

1.2 Contexte

| | | | |
|----------|-------|--------------------|-------------------|
| Γ | $::=$ | ϵ | empty context |
| | | $\Gamma, x : \tau$ | adding a variable |

| | |
|-----------------------------------|---|
| $\frac{}{\text{valid}(\epsilon)}$ | $\frac{\text{valid}(\Gamma) \quad \Gamma \vdash \tau \Leftarrow \star}{\text{valid}(\Gamma, x : \tau)}$ |
|-----------------------------------|---|

1.3 Evaluation

| | | | |
|-------------|-------|---------------------------|--------------------------|
| ν, τ | $::=$ | n | neutral term |
| | | $\lambda x \mapsto \nu$ | lambda |
| | | (ν, ν') | tuple |
| | | \star | type of types |
| | | $\Pi(x : \tau). \tau'$ | dependent function space |
| | | $\Sigma(x : \tau). \tau'$ | dependent pair space |

| | |
|-------------------------|---------------------------|
| $n ::= x$ | variable |
| $ \quad n \ \nu$ | neutral app |
| $ \quad \text{fst } n$ | neutral first projection |
| $ \quad \text{snd } n$ | neutral second projection |

$$\begin{array}{c}
\frac{}{\star \Downarrow \star} \text{ (STAR)} \qquad \frac{}{x \Downarrow x} \text{ (VAR)} \qquad \frac{e \Downarrow \nu}{e : \sigma \Downarrow \nu} \text{ (ANN)} \\
\\
\frac{e \Downarrow \nu}{\lambda x \mapsto e \Downarrow \lambda x \mapsto \nu} \text{ (LAM)} \qquad \frac{e \Downarrow \nu \quad e' \Downarrow \nu'}{(e, e') \Downarrow (\nu, \nu')} \text{ (TUPLE)} \\
\\
\frac{e \Downarrow \lambda x \mapsto \nu \quad \nu[x \mapsto e'] \Downarrow \nu'}{e \ e' \Downarrow \nu'} \text{ (APP)} \qquad \frac{e \Downarrow n \quad e' \Downarrow \nu'}{e \ e' \Downarrow n \ \nu'} \text{ (NAPP)} \\
\\
\frac{e \Downarrow (\nu, \nu')}{\text{fst } e \Downarrow \nu} \text{ (FST)} \qquad \frac{e \Downarrow (\nu, \nu')}{\text{snd } e \Downarrow \nu'} \text{ (SND)} \qquad \frac{e \Downarrow n}{\text{fst } e \Downarrow \text{fst } n} \text{ (NFST)} \\
\\
\frac{e \Downarrow n}{\text{snd } e \Downarrow \text{snd } n} \text{ (NSND)} \qquad \frac{\sigma \Downarrow \tau \quad \sigma' \Downarrow \tau'}{\Pi(x : \sigma).\sigma' \Downarrow \Pi(x : \tau).\tau'} \text{ (PI)} \\
\\
\frac{\sigma \Downarrow \tau \quad \sigma' \Downarrow \tau'}{\Sigma(x : \sigma).\sigma' \Downarrow \Sigma(x : \tau).\tau'} \text{ (SIGMA)}
\end{array}$$

1.4 Typing

In the following, $e \Rightarrow \tau$ is an expression whose type synthesizes to τ while $e \Leftarrow \tau$ is checkable.

$$\frac{\Gamma \vdash e \Rightarrow \tau}{\Gamma \vdash e \Leftarrow \tau} \text{ (CHK)} \qquad \frac{\Gamma \vdash \sigma \Leftarrow * \quad \sigma \Downarrow \tau \quad \Gamma \vdash e \Leftarrow \tau}{\Gamma \vdash (e : \sigma) \Rightarrow \tau} \text{ (ANN)}$$

$$\frac{}{\Gamma \vdash \star \Rightarrow \star} \text{ (STAR)} \qquad \frac{\Gamma(x) = \tau}{\Gamma \vdash x \Rightarrow \tau} \text{ (VAR)}$$

$$\frac{\Gamma, x : \tau \vdash e \Leftarrow \tau'}{\Gamma \vdash \lambda x \mapsto e \Leftarrow \Pi(x : \tau). \tau'} \text{ (LAM)}$$

$$\frac{\Gamma \vdash e \Leftarrow \tau \quad \Gamma \vdash e' \Leftarrow \tau'}{\Gamma \vdash (e, e') \Leftarrow \Sigma(x : \tau). \tau'} \text{ (TUPLE)}$$

$$\frac{\Gamma \vdash e \Rightarrow \Pi(x : \tau). \tau' \quad \Gamma \vdash e' \Leftarrow \tau \quad \tau'[x \mapsto e'] \Downarrow \tau''}{\Gamma \vdash e e' \Rightarrow \tau''} \text{ (APP)}$$

$$\frac{\Gamma \vdash e \Rightarrow \Sigma(x : \tau). \tau'}{\Gamma \vdash \text{fst } e \Rightarrow \tau} \text{ (FST)}$$

$$\frac{\Gamma \vdash e \Rightarrow \Sigma(x : \tau). \tau' \quad \tau'[x \mapsto \text{fst } e] \Downarrow \tau''}{\Gamma \vdash \text{snd } e \Rightarrow \tau''} \text{ (SND)}$$

$$\frac{\Gamma \vdash \sigma \Leftarrow * \quad \sigma \Downarrow \tau \quad \Gamma, x : \tau \vdash \sigma' \Leftarrow *}{\Gamma \vdash \Pi(x : \sigma). \sigma' \Rightarrow \star} \text{ (PI)}$$

$$\frac{\Gamma \vdash \sigma \Leftarrow * \quad \sigma \Downarrow \tau \quad \Gamma, x : \tau \vdash \sigma' \Leftarrow *}{\Gamma \vdash \Sigma(x : \sigma). \sigma' \Rightarrow \star} \text{ (SIGMA)}$$

Une reformulation équivalentes des règles (PI) et (SIGMA), plus adaptée pour l'implémentation :

$$\frac{\Gamma \vdash \sigma \Leftarrow * \quad \sigma \Downarrow \tau \quad \Gamma \vdash \sigma' \Leftarrow \Pi(x : \tau). \star}{\Gamma \vdash \Pi(x : \sigma). \sigma' \Rightarrow \star} \text{ (PI)}$$

$$\frac{\Gamma \vdash \sigma \Leftarrow * \quad \sigma \Downarrow \tau \quad \Gamma \vdash \sigma' \Leftarrow \Pi(x : \tau). \star}{\Gamma \vdash \Sigma(x : \sigma). \sigma' \Rightarrow \star} \text{ (SIGMA)}$$
